

KEY

LED vs. Incandescent Cost Comparison: Lesson 2

“Why should I change my light bulbs to LED’s?
That is a great question! To get the answer, we need to look at the life cycle cost for light bulbs.

What is the life cycle cost? The life cycle cost is the initial cost of the appliance (in our case a light bulb) AND the cost of energy needed to use the appliance over its life.

Initial cost of light bulb + Energy costs (electricity)
= Life Cycle Cost of light bulb

Use the chart at the right to complete the equations below to determine which light bulb has the lowest life cycle cost and the greatest savings to provide 15,000 hours of light.

Bulb Specifications	IL Incandescent	LED Light Emitting Diode
Light Output (lumens)	640 lumens	800 lumens
Life Expectancy (hours)	2,500 hours	15,000 hours
Energy Used (watts)	60 watts	9.5watts
Cost per Bulb (dollars)	\$.50	\$3.00
Number of Bulbs needed for 15,000 hours of light	6	1
Cost of Light Bulbs for 15,000 hours of light	\$3.00 (circle 1)	\$3.00 (circle 3)
Cost of Electricity for 15,000 hours of light	\$117.00 (circle 2)	\$18.53 (circle 4)

Use the table above to complete the chart.

Incandescent

Cost of Incandescent Bulbs

Cost of Electricity

Incandescent Life Cycle Cost

LED

Cost of LED Bulbs

Cost of Electricity

LED Life Cycle Cost

Savings

Incandescent Life Cycle Cost

LED Life Cycle Cost

Life Cycle Savings for replacing one IL with a LED
